Pred. No.

is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.

Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least 1 agronomically-significant characteristic (ACS). In a preferred method, a helper cell line which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration. Celaimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNASe-H sequence (see AAZ35254-61). Also provided are plant retroviral particles that are used to transfer the nucleic acids into plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                 retroelement containing vectors, cells and plants. Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least I agronomically significant characteristic (ACS). In a preferred method, a helper cell line which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrate, reverse transcriptase, protease or RNAse-H sequence (see AAZ35254-61). Also provided are plant retroviral particles that are used to transfer the nucleic acids
                                                                                                                                                                                                                                                                              The present sequence comprises a generic plant retroelement obtained from retrovirus like elements (retroelements) calypso of soybean, cyclops of pea and athila of Arabidopsis thaliana. The invention provides molecular tools in the form of retroelements and

Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least 1 agronomically-significant characteristic (ACS). In a preferred method, a helper cell line which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration. Claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNAse-H sequence (see ANZ35254-61). Also provided are plant retroviral particles that particles are used to transfer the nucleic acids into plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      library using a reverse transcriptase probe. 2 Groups of soybean retroelements were identified, i.e. Calypso 1-1, 1-2 and 1-3 (see AAZ35271-73) and Calypso 2-1 and 2-2 (see AAZ35274-75). The retroelements include gag, pol, env and primer binding site sequences that can be used in constructs of the invention. The invention provides molecular tools in the form of retroelements and invention provides molecular tools in the form of retroelements and

                                                                                                                                                                                                                                                            밁
                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents the reverse transcriptase gene of cretrovirus-like element (retroelement) calpso of soybean. The cinvention provides molecular tools in the form of retroelements and retroelement-containing vectors, cells and plants. Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least 1 agronomically-significant characteristic (ACS). In a preferred method, a helper cell line which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration. Claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNAse H sequence (see AAZ3524-61). Also provided are plant retroviral particles that comprise a retrovirus protein encoded by a nucleic acid sequence encoding a plant retroviral envelope protein and a nucleic acid including e.g. the present sequence. These plant retroviral

This is the nucleotide sequence of the Calypso 1-1 retroelement of complete soybean. It was identified by screening of a soybean lambda complete soybean using a reverse transcriptase probe. 2 Groups of soybean retroelements were identified, i.e. Calypso 1-1, 1-2 and 1-3 complete soybean complet
                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecules for imparting agronomically characters to plants, especially soybean

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNAse-H sequence. (see AAZ35254-61). Also provided are plant retroviral particles that particles are used to transfer the nucleic acids into plant cells.

which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration. Claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNAse-H sequence (see ANZ35254-61) Also provided are plant retroviral particles that
                                                                                                                                                                                                                                                                          soybean. It was identified by screening of a soybean lambda library using a reverse transcriptes probe. 2 Groups of soybea retroelements were identified, i.e. Calypso 1-1, 1-2 and 1-3 (see AAZ35271-73) and Calypso 2-1 and 2-2 (see AAZ35274-75). The retroelements include gag, pol, env and primer binding site sequences that can be used in constructs of the invention. The invention provides molecular tools in the form of retroelements invention provides molecular tools in the form of retroelements.
                                                                                                                                                                                             retroelement-containing vectors, cells and plants. Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least 1 agronomically-significant characteristic (ACS). In a preferred method, a helper cell line
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid molecules for imparting characters to plants, especially soybean
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-MAY-1998;

                                                                                                                                                              which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration. Claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNAse-H sequence (see ARZ35254-61). Also provided are plant retroviral particles that
                                                                                                                                                                                                                                                                                                                                 retroelement containing vectors, cells and plants. Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least 1 agronomically-significant characteristic (ACS). In a preferred method, a helper cell line than the retroelement carries at least 1 agronomically-significant characteristic (ACS).
                                                                                                                                                                                                                                                                                                                                                                                                                            soybean. It was identified by screening of a soybean lambda library using a reverse transcriptase probe 2 Groups of soybean retroelements were identified 1.e. Calypso 1-1, 1-2 and 1-3 (see AAZ35271-73) and Calypso 2-1 and 2-2 (see AAZ35274-75). The retroelements include gag, pol, env and primer binding site sequences that can be used in constructs of the invention. The invention provides molecular tools in the form of retroelements and primer binding site invention provides molecular tools in the form of retroelements are invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New nucleic acid molecules for imparting agronomically significant characters to plants, especially soybean -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      29-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 which expresses gag, pol and env sequences is used to enable transfer of a secondary construct which carries an ASC and has retroelement sequences that allow for replication and integration. Claimed isolated nucleic acid molecules comprise a nucleic acid sequence selected from a retroelement primer binding site, envelope, gag, integrase, reverse transcriptase, protease or RNAse-H sequence (see AAZ35254-61). Also provided are plant retroviral particles that comprise a retrovirus protein encoded by a nucleic acid sequence encoding a plant retroviral envelope protein and a nucleic acid including e.g. the present sequence. These plant retroviral particles are used to transfer the nucleic acids into plant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          retroelement-containing vectors, cells and plants. Methods are provided for introducing the retroelements into cells, especially when the retroelement carries at least 1 agronomically-significant characteristic (ACS). In a preferred method, a helper cell line

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a recombinant DNA construct of a (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of transgenic plant and animal cells expressing the construction of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 102; Page 804-819; 1449pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Recombinant DNA construct comprising a plant centromere, useful producing stably inherited michrosomes which can serve as vector the construction of transgenic plant and animal cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BAC containing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                               Best
                                                                                                                                                                                                      Query Match
                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                         The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  01-APR-1999;
